Import Invoices

Pre-Conditions:

- · Customer Addressbook, Service Location, and Jobs have been imported successfully.
- Use the Invoice template with the columns in the table below. We need the Customer ID, Service Location ID, and Job ID from the previous import. For the current import, we need the Invoice ID, Notes, or other details in the template you want to get imported.
- Note that the Invoice ID must be filled out. If they don't have Invoice ID information, they have to generate their own IDs.
- The file should not have duplicate records. If it does, please note that they will be imported separately.
- · Check for bad data in the file in Notes, Invoice Date columns, etc. Bad Data can cause an unsuccessful import.
- Make sure to delete the column names before you import them into Industrack. Otherwise, it will cause issues during the import.

		CANCEL SAVE

6. If all Rows were successfully imported, do a spot check in the Customer Module> select certain customer> invoices tab, and verify the information imported is ACCURATE.

7. If unsuccessful, rows with the error will not be uploaded and the number of successful rows will not be the same as the total number of rows in the file. This is what happens if you import files with Bad Data.

All Rows	Number Of Successful	Number Of Errors	
350	0	0	
Lines with errors:			
			EXPORT TO EXCE
Line Number	Content T	Error	т
90	["1416","809253","Condenser Fan Rain Protector","","Assembly","T610046","To protect a new fan motor from the elements a rain protector is recommended. The protector keeps rain and snow from getting into the inner working of the motor, extending the life of the motor. Should be quoted on all outdoor motors exposed to the weather","191","191","1"]	Nullable object must have a value.	

8. You will be able to see the line number in your file where the error is located and the line's content. The detail of the error is also explained in the error tab.

9. You can export the error detail to excel and determine what is causing the error.

10. After the error is determined, edit your Invoice File remove bad data then reimport back again.
