

Vehicle Alerts

Define and set up alerts for different types of vehicles. For example, create a Speed Over alert and apply this to all of your vehicles. You can also set up multiple Speed Over alerts that can be applied to specific types of vehicles. For example, set up different Speed Over alerts for cars, trucks, and for snow plows.

When a vehicle alert is triggered, notifications will be sent out. If set up, the alert will be sent via email or SMS message. The alert window on the map page will also show the vehicle safety alerts that have been triggered.

To set up and manage vehicle alerts, go to **Settings > Vehicle Tracking > Alerts**.

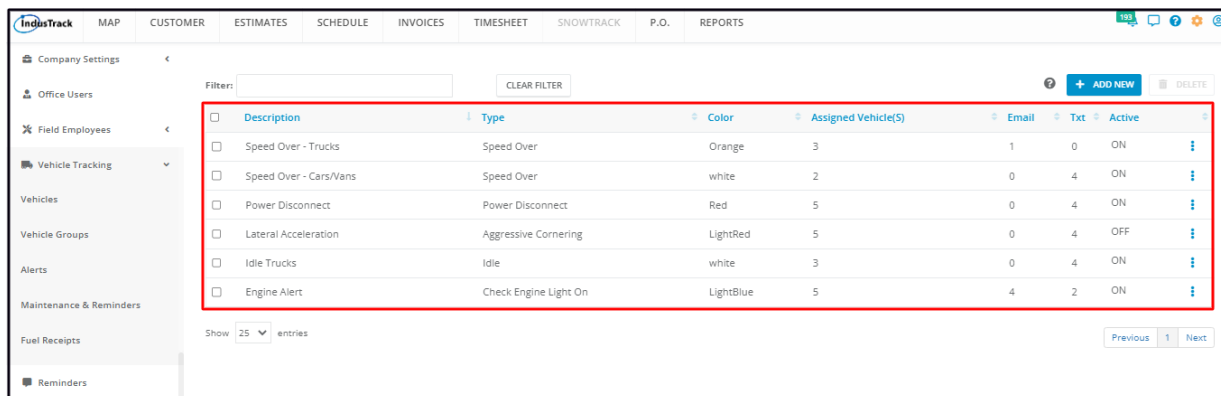

Vehicle Alerts Table

The Alerts page defaults to the **Vehicle Alerts List**. Information about the different vehicle alerts is displayed on the table.

The Vehicle Alerts table has 8 columns:

- **Description** – Refers to the name/short description that has been given to the Vehicle Alert.
- **Type** – Refers to the selected vehicle alert type.
- **Color** – Refers to the Alert Color. When the alert fires, the notification as it appears on the Map will be color-coded based on the selected Alert Color.
- **Assigned Vehicle(s)** – Refers to the number of vehicles that the alert applies to. To view the specific vehicles, open the Alert details.
- **Email** – Refers to the number of email addresses that will receive vehicle alert email messages. To view the specific email addresses, open the Alert details.
- **Txt** – Refers to the number of phone numbers that will receive vehicle alert text messages. To view the specific phone numbers, open the Alert details.
- **Active** – Refers to the status of the alert, either ON or OFF.
- **Actions Icon** – Used to **Turn off/on**, **Edit** or **Delete** a Vehicle alert.

Sort the Vehicle Alerts list

Click on the column header to sort the list according to the preferred field.
