Email Integration

IndusTrack can be integrated into different email platforms. Connect IndusTrack to your company email to be able to send emails from your own company address.

Go to Settings > Integrations > Emails to set up the connection in IndusTrack.

Other IMAP/SMTP Connection

If you have an email account with other platforms like **Yahoo**, you can integrate them by entering IMAP and SMTP information in IndusTrack.

Click Other SMTP Connection on Email Settings page.

📕 Mobile Ap	p											

On Edit Email Connection window, enter the **Username** and **Password** of your Yahoo account. Check the box for "Same login as IMAP" to avoid entering the information twice.

MAP Connection Info			SMTP Connection I	nfo	
				Same login as IMAP	
Username *			Username *		
Password *			Password *		
dvanced Settings			Advanced Settings		
Host *			Host *		
Port *	993		Port *	587	
Protocol *	SSL/TLS	~	Protocol *	STARTTLS	~

Complete the information under both IMAP and SMTP Advanced Settings section.

IMAP Host: imap.secureserver.net Port: 993 Protocol: SSL/TLS

SMTP Host: smtpout.secureserver.net Port: 465 or 587 Protocol: STARTTLS

Click **SAVE** once done and the connection will be established.

When establishing an email integration with a **Yahoo account**, the best practice is to set up the SMTP configuration using **Port 465** and **Protocol SSL/TLS**. If you use Port 587 and Protocol STARTTLS, emails from IndusTrack will go into the Junk folder. On IMAP Connection, you need to use Port 993 and Protocol SSL/TLS.
